Important hints:

You can remove users via the `dropUser()` command
(https://docs.mongodb.com/manual/reference/method/db.dropUser/), you can find
out which users exist via the `getUsers()` command
(https://docs.mongodb.com/manual/reference/method/db.getUsers/).

If you want to reset the entire database environment, you can easily do that by
quitting the MongoDB server (`CTRL + C`) and deleting the db folder (where you store
the database files).
